HAZUS Earthquake Loss Estimation Report for Project Impact Communities

Northeast States Emergency Consortium

The award for Use of New Technology was given to the Northeast States Emergency Consortium (NESEC) for its HAZUS Earthquake Loss Estimation Report for Project Impact Communities. The program developed a user-friendly report format to provide a HAZUS Earthquake Loss Estimate Report to FEMA Project Impact Communities within the NESEC states. The project raises interest in the utilization of GIS technology like HAZUS, which in turn raises awareness of the earthquake hazard in states with a moderate hazard. The report displays results in text, graphs, and maps, and could be further modified by future HAZUS flooding and wind modules.
