The Social Response in Nevada

Nevada's financial health was threatened by the 1906 earthquake with the loss of company offices, bank closings in San Francisco, and the loss of potential investors. Lieutenant Governor Lemai Allen issued an official proclamation declaring a public holiday for five days starting on April 26 to close banks and prevent a run on bank deposits. Upon returning to Nevada, Governor Sparks allowed the banks to open for a couple of days after extending the "holiday".

Although there was a distinct impact on the Comstock mines in Virginia City, the overall financial effect on Nevada was limited to a few months because the boom areas, Tonopah, Goldfield, and Pioche, had headquarters and investors outside of San Francisco. An example of a Comstock mine where the effect was most noticeable was the Virginia mine, which sank and collapsed during the earthquake, resulting in a loss of 100 lives and property valued at over a million dollars. However, San Francisco banks closed, and Virginia City, the resting place of the Virginia mine, was filled with Westers and Fairview were in the early phases of mine development, which was damaged several months because of the San Francisco catastrophe.

The April 18th 1906 San Francisco Earthquake

Nevada Earthquakes Triggered by the 1906 Event

A few small- to moderate-sized earthquakes in Nevada were likely triggered by the passage of waves from the 1906 San Francisco Earthquake. Events began at 0:06 p.m. (PST) on April 18th, 93 hours following the great event, and were located to the east of San Francisco. These events affected sales and business in Nevada. From May 24th to May 29th, sales activity continued at the Nevada State Fair.
